Map Format Exchange Utility

Want to update your CAD files without having to go to an architect? Or better yet, don't have CAD files?
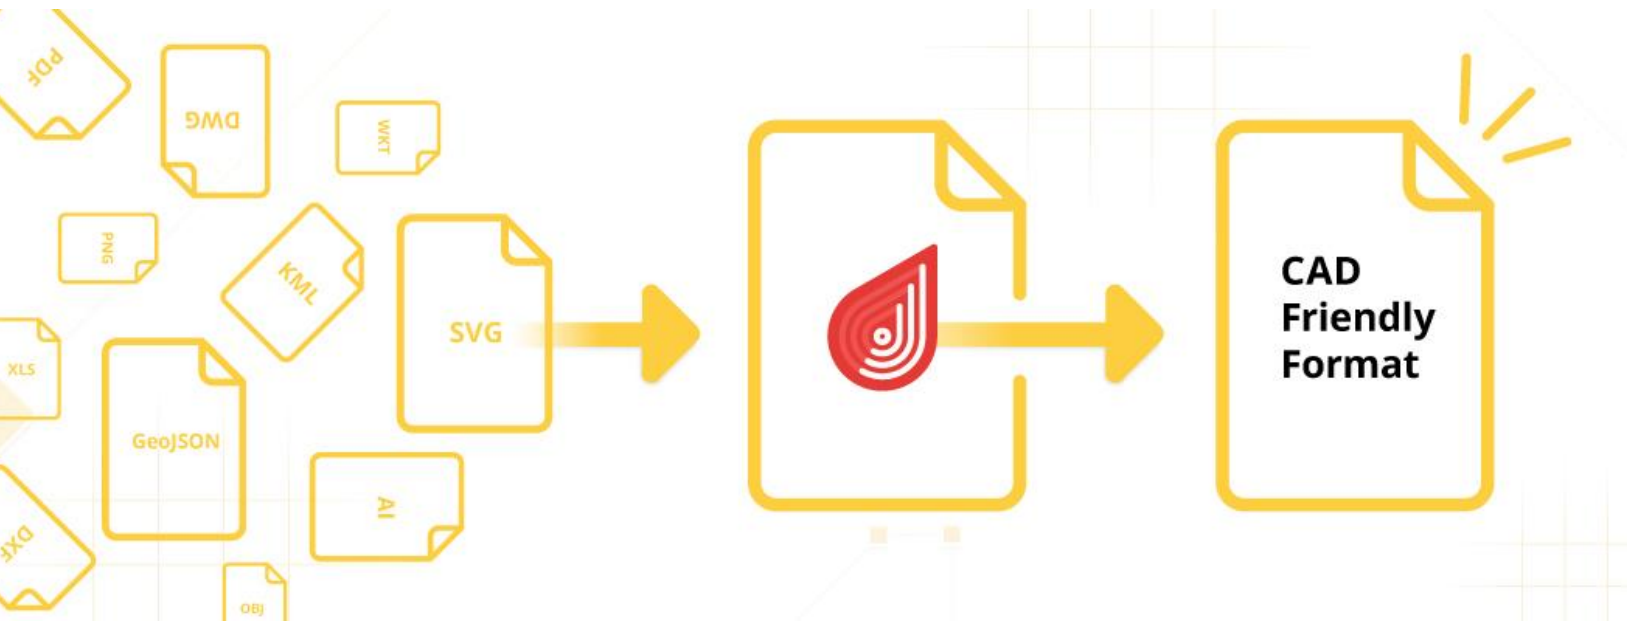

Now you can leverage Jibestream's map exchange utility to convert and download your maps in a CAD-friendly format that can be opened in applications such as AutoCAD, FreeCAD, DraftSight, Illustrator, or any other CAD viewer.

Why does this matter?

Most other systems don't allow you to make changes to _and_ extract your map with those changes saved. Rather, you are typically only able to retrieve the version you originally put in, meaning all your recent modifications are lost when you extract your map from the editor program.

With Jibestream's map exchange utility, you can modify, add data, and save your maps in a CAD-friendly format, without having to engage an architect.

While other indoor map companies have map editors that can work with CAD files, Jibestream is the only indoor mapping platform that gives you the ability to extract maps with your saved changes in a CAD-friendly format.

Make changes to your maps. Export your maps in a CAD-friendly format with all your changes reflected. All from within Jibestream!

Easily create, work with, and download CAD-friendly maps with Jibestream's indoor mapping platform. The new map format exchange feature allows users to:

- Manage CAD-friendly maps that are uniform across your enterprise – and can be used as a single source of truth
- Store maps in Jibestream's centralized cloud-based CMS
- Seamlessly extract maps and associated data out of Jibestream
- Rest assured that changes made in Jibestream's Map Editor will be reflected in your export
- Generate maps that are compatible with any system that supports CAD-friendly drawings

With Jibestream, you will always have access to the latest CAD files for your buildings
