Wheelchair Tracking

The impact of inefficient inventory tracking in hospitals

Up to 25% loss

As many as 200 wheelchairs are reported lost or stolen annually

1 Million USD

The cost of wages lost per year spent searching for assets

Negative impact on patient experience, operations and workflows

options for patients

70,000 USD

Annual cost to replace wheelchairs

What can be done?

Indoor Mapping See where wheelchairs

are located on your facility's map in real-time

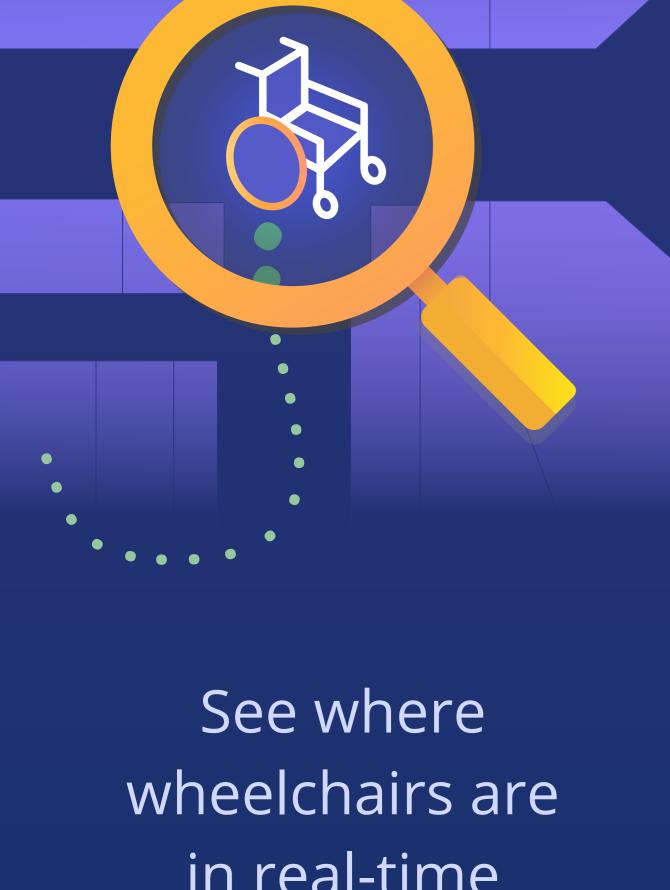

Accurately track the location of wheelchairs

Indoor Positioning

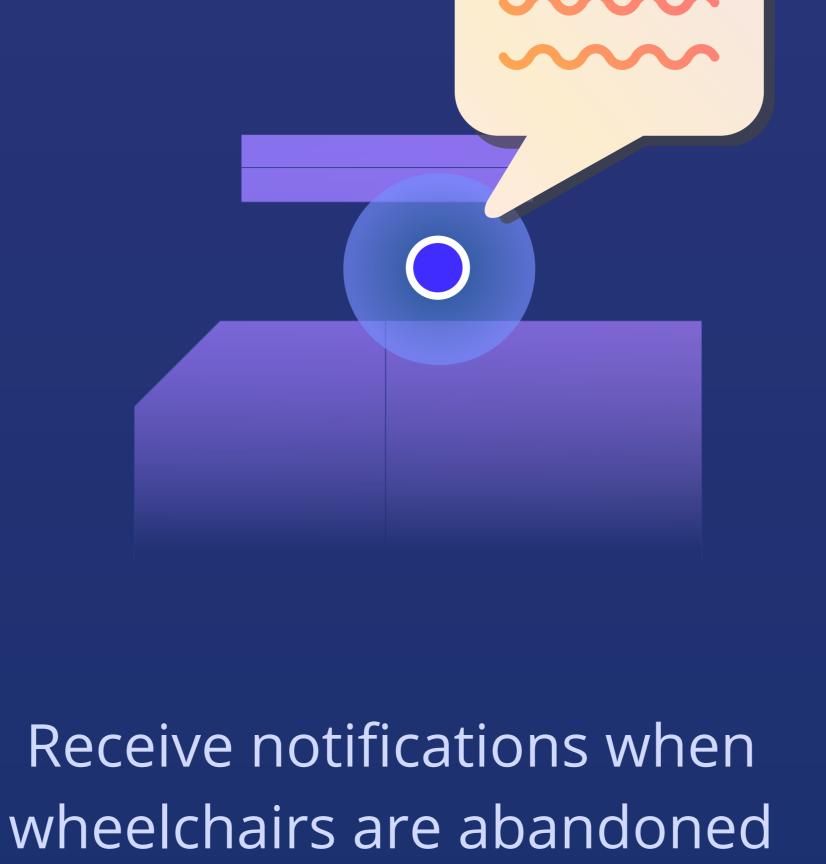

in real-time

impact your healthcare center?

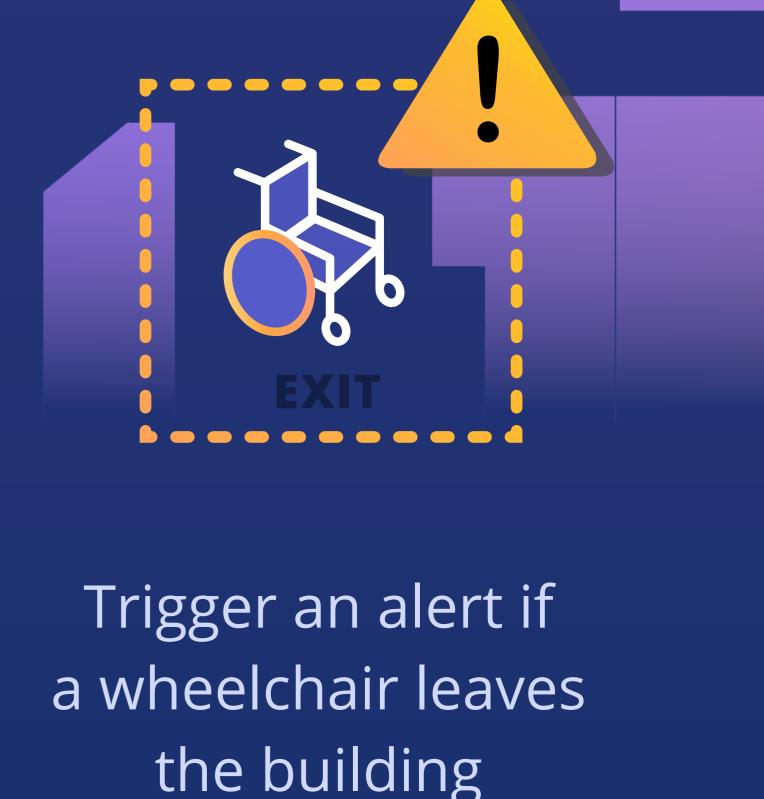

How will asset tracking technology

in real-time

or left somewhere remote

V Increased patient

What does this mean?

V Increased visibility See the real-time location

of wheelchairs in the

satisfaction Provide better patient care

V Improved staff efficiency Save valuable time being spent searching for

wheelchairs

context of a map
